

3 LEVELS OF PRIORITY MAINTENANCE

MHR's priority maintenance program goes beyond the standard PM program to extend the life of your equipment's major components.

- LEVEL 1: Standard quarterly / 200-300 hour PM
- LEVEL 2: Level 1 plus items required annually or 1200-1500 range
- LEVEL 3: Levels 1 and 2 plus items required in 3600-4800 hours

You may have questions like;

- *Why do I need major or multi-level PMs?*
- *How can MHR track my major items?*

Well first off, forklifts require some maintenance items like a radiator flush, hydraulic oil changes, wheel bearing repack etc on much longer intervals than the basic 200-300 hour PM that is done frequently.

Also MHR groups these items together, based on the equipment type and application. They are divided into 2 or 3 levels. Each piece of equipment will have different levels of service due at the proper intervals, as shown above.

EXAMPLE: Komatsu 5,000 # LPG Cushion in 1200 hour per year application

- LEVEL 1- Quarterly PM inspection including basic engine oil filter change, safety inspections, adjustments, etc.
- LEVEL 2- Annual PM inspection including all level 1 items. Additional items would include hydraulic oil strainer / filter, valve adjustment, and transmission oil / filter change.
- LEVEL 3- 24 month or 2400 hour PM inspection: ALL levels including: hydraulic oil change, install new spark plugs, flush and refill cooling system, remove all wheels and repack bearings, remove brake drums to inspect brake lining.

Specific types of equipment have varying maintenance items and intervals, so this is just a sample of what MHR's Multi-Level PM Service will do for you.

BUDGET OPTIONS:

-Standard "Per Call or Per PM" invoicing: With MHR you get a flat rate per service on Level 1 PMs. Levels 2 and 3 are quoted for your approval.

BUDGET MAINTENANCE INVOICING: You get one fixed monthly payment that covers labor, parts, and all materials. This can also be easily integrated with monthly lease/rental bills on new equipment so you know all your scheduled maintenance will be taken care of. Scheduling of these services are still done around your operations and still are scheduled in advance.
